

Cinema Lundy ERD

Sam Lundy | August 9, 2023

I left the original intact just to show my trian and errors.. I had to remove some FKs just because I wasn't able to add them if they weren't referencing other PKs or columns with the UNIQUE constraint.

Either way, I learned a lot here. However, I feel very weird just leaving concessions unlinked to anything. Can't figure out what I would link it to.. I guess stock amount can point to store_id to make sure the inventory checks out before someone orders popcorn.

Then I added an FK map from discount_avail in concessions to the loyalty_id of customers. In my mind, the system will check the unique ID and see if they have discounts available.
